Q. Can you do the same procedure as above to plot the pathview figures for the top 5 down-regulated pathways?

```
keggrespathways_down <- rownames(keggres$less)[1:5]

# Extract the 8 character long IDs part of each string
keggresids_down = substr(keggrespathways_down, start=1, stop=8)
```

```
keggresids_down
```

```
[1] "hsa04110" "hsa03030" "hsa03013" "hsa03440" "hsa04114"
```

```
pathview(gene.data=foldchanges, pathway.id=keggresids_down, species="hsa")
```

```
'select()' returned 1:1 mapping between keys and columns
```

```
Info: Working in directory /Users/jackie-l/Desktop/Bioinformatics/14-RNA-seq-mini-proj
```

```
Info: Writing image file hsa04110.pathview.png
```

```

Section 4: reactome

```
sig_genes <- res[res$padj <= 0.05 & !is.na(res$padj), "symbol"]  
  
print(paste("Total number of significant genes:", length(sig_genes)))
```

```
[1] "Total number of significant genes: 8147"
```

```
write.table(sig_genes, file="significant_genes.txt", row.names=FALSE, col.names=FALSE, quo
```

Q: What pathway has the most significant “Entities p-value”? Do the most significant pathways listed match your previous KEGG results? What factors could cause differences between the two methods?

Reactome: Cell Cycle, mitotic entities p-value = 5.28E-4

KEGG: UP = caffeine metabolism, drug metabolism, purine metabolism KEGG: down= cell cycle, dna replication, rna transport

So yes, they are similar. Reactome is looking at ALL sig genes, regardless if theyre up or downregulated. Reactome probably is also pulling from a different source than KEGG

Section 5. GO online (OPTIONAL) Q: What pathway has the most significant “Entities p-value”? Do the most significant pathways listed match your previous KEGG results? What factors could cause differences between the two methods?

GO: regulation of cell migration involved in sprouting angiogenesis, platelet-derived growth factor receptor signaling pathway, negative regulation of metaphase/anaphase transition of cell cycle

GO is looking for over-represented or under-represented GO terms for a given set of genes, and the annotations are different than KEGG, which may account for the differences. Again, this is looking at ALL sig genes, regardless if theyre up or downregulated
